WATER EXPERIENCE

With over 40 years of experience, at ACRILAN we always aim for new innovative products that can improve the daily lifestyle and offer moments of relaxation and well-being, transforming water into a means of well-being.

With more than 40 years of experience, we at ACRILAN always aim at innovative new products that can improve daily life and offer moments of relaxation and wellness, transforming water into a source of well-being.

Machine Translated by Google

ACRILAN is the first Greek company to manufacture acrylic bathtubs in 1982. The production took place entirely in our factory's own facilities (40,000 sq.m. and 6,000 sq.m.) in Chalkidona, Thessaloniki, which marks the operation of her until today. From its first steps, ACRILAN, as a pioneer in the Greek area, shows an upward trend in the estimation of customers and rightfully today it is in the first positions in the field of production and distribution of sanitary ware. From the first moment ACRILAN, with its unique philosophy, stood out thanks to the design of its products but also the stable relationship between the price and the quality it offers to the customer. At ACRILAN, we dedicate all our know-how to the conversion (transformation) of water as a means of relaxation and well-being. ACRILAN for the production of its products uses cast acrylic, which is characterized by its antibacterial properties, which meet all the specifications set by the norms of the European Union (EN14516, EN232, EN12764 and EN14527), having all the necessary certifications.

ACRILAN SA is the first Greek company that manufactured acrylic bathtubs in 1982. The production has been taken place entirely in our factory (40,000m2 and 6,000m2 housed spaces) in Chalkidona Thessaloniki. In ACRILAN we devote all our experience and our inspiration in the transformation of water in a medium of relaxation and well-being. Our products are enjoying an affordable proposal in which form and function coexist harmoniously. ACRILAN uses acrylic sheet, which covers all the standards and requirements set by the EU. The European Regulation Standards, applying the standards EN14516, EN232, EN12764 and EN14527, determine the properties required of cast acrylic sheets for the manufacture of shower and tub, as well as finished products for sale. The structure of the color, thickness, stiffness, no absorption, the resistance to impact, the hot water and the cleaning products are some of the properties listed and required in the above specifications.

MAXXcoat®

maximum durability

Acrilan, as a pioneer manufacturer of acrylic bathtubs, combines the knowledge of science with many years of experience and modern technology, standing out for the reliability and quality of its products. Through this constant effort, we present to you the Maxx Coat strengthening technique which guarantees:

- absolute rigidity
- robustness
- strong durability
- maximum thermal insulation
- enhanced sound insulation
- keeping hot water for a longer period of time
- preservation of original acrylic shine
- unchanged stability over time
- moisture resistance
- waterproofness

Available on certain models for extra reinforcement.

Acrilan SA, being a pioneer manufacturer of acrylic bathtubs in Greece, combines the scientific knowledge with modern technology & its vast experience while its products stand out for their reliability and top quality. Through this constant effort, we hereby present you the new Maxx Coat reinforcement technique which guarantees the following:

- total rigidity (non-crack)
- solidity
- strong durability
- maximum thermal insulation
- reinforced soundproofing
- keeping water hot for a longer time
- maintaining the original acrylic shine
- invariable stability over time
- resistance to humidity
- waterproofness

Maxx Coat is available in certain product designs for extra reinforcement.

acrylics/acrylics panels.

Their refined, velvety and matte texture offers the luxurious look and feel of natural stone, accompanied by all the advantages and high performance of an acrylic material. This innovative material stands out for its elegance and creates an innovative product category while satisfying the needs of the end consumer through the offered matte color options.

Their refined, velvety and matte appearance offers the luxurious look and feel of a natural stone, accompanied by all the advantages and high performance of an acrylic material. This material undoubtedly evokes the interest of experts in decoration, such as interior designers, architects and of course consumers, with its modern appearance, while maintaining all those advantages offered by a cellular material of molded acrylic. This innovative material stands out for its elegance and creates a unique product category while meeting the needs of the end consumer through the matte color options offered.

circular

circular *bathtubs*

The special shape of the circular bathtubs serves the needs of the elaborate style and manages to transform your bathroom into the center of attention.

The particular shape of the round bathtubs serves your needs for a special style and manages to get your bathroom into the center of everyone's attention.

Handmade Sisal Cladding

The company Acrilan presents an idea for the perimeter lining of circular bathtubs: the handmade braiding of sisal fibers. Sisal ropes are produced from the plant product sisal or, as it is otherwise referred to, “sisal hemp”. The fibers of the plant are durable with long durability, shaved and processed in a suitable way so that they do not cause problems during their use. Sisal is traditionally used as a raw material in rope making. At Acrilan, we knit it on a base, it is handmade, while its waterproofing and oil repellency are achieved by coating a special wax, thus effectively repelling water and oily stains. In addition, sisal resists moisture and microorganisms for a long time, thus increasing the lifespan of the bathtubs.

Acrilan SA presents an idea for the perimetric coating of the circular bathtubs: the handmade sisal rope. Sisal ropes are produced from the natural fiber sisal or, as it is also called, "sisal hemp". The fibers of the plant are strong with long durability, shaved and processed in a suitable way so that they do not cause any problems during their use. Sisal is traditionally used as a raw material in rope making. In our company, Acrilan SA, we knit it onto a base & it is handmade, while its waterproofing and oil repellency are achieved by a coating of a special wax, thus effectively repelling water and oily stains. In addition, sisal resists moisture and microorganisms for a very long time, thus increasing the lifespan of our bathtubs.

Disinfectant Treatment (Shock).

It is a product designed for the thorough and particularly energetic cleaning of hydromassage systems. It is the ideal product when the level of pollution and organic contamination cannot be removed with a normal disinfectant. It works effectively by removing entrapped organic residue and limestone deposits. Thoroughly cleans the hydromassage system pipes, electric pump and elements in contact with water, renewing the system and making it healthy and fit for use again.

Disinfectant Treatment Shock.

It is a product designed for the thorough and particularly effective cleaning of hydromassage systems. It is the ideal product when the level of pollution and organic contamination cannot be removed with a usual disinfectant. It works effectively by removing the entrapped organic residue and limestone deposits. It thoroughly cleans the system pipes, the electric pump and all the elements getting in contact with water, thus renewing the system and making it totally clean and fit for use again.

Water captured by the charm of steel

The company Ferplast, based in Italy, has been active in the field since 1970 and produces products of high quality and aesthetics. All products are manufactured without welding in a single piece of AISI 304 stainless steel, which makes them extremely resistant to corrosion and the wear of time. Also, the products are easy to maintain and have an excellent performance in terms of hygiene. All the above features allow the warranty to be extended to 20 years.

The Ferplast company Ferplast, having its headquarters in Italy, has been active in the industry sector since 1970 and it manufactures products of high quality and aesthetics. All its products are manufactured without welding in a single piece of AISI 304 stainless steel, which makes them extremely resistant to corrosion and the damage coming from their use. Also its products are easy to maintain and they have an excellent performance in terms of hygiene. All the above features allow the warranty to be extended to 20 years.

232

The Ferplast patent / The Ferplast patent

TOP VALVE®
Brevettato in Italia

The Top Valve, which can be combined with most grills
Ferplast, consists of two parts: a thermoplastic recyclable ABS body and a silicone membrane, designed to subside with gravity in the normal passage of water. When calm, the Top Valve seals tightly after the flow, preventing unpleasant odors and insects from coming out of the drain, as well as backflow of sewage.

The Top Valve product, which can be combined with most Ferplast grids, consists of two parts: a thermoplastic recyclable ABS main body and a silicone membrane, designed to subside by gravity during regular water flow. When water flow stops, the Top Valve is sealed tightly, thus preventing any unpleasant odors and insects from coming out of the drain, as well as any backflow of sewage.

Advantages / Advantages

• Easy and quick installation and replacement • Easy maintenance and cleaning • Resistance to high temperatures and chemical products • Prevents unpleasant odors, insects and possible water return.
• Profile that does not exceed 7cm

• Easy and quick installation and replacement
• Easy maintenance and cleaning
• Resistance to high temperatures and chemical products
• Prevents unpleasant odors, insects and possible water backflow.
• Profile that does not exceed 7cm.

citrocal steam generator cleaner .

Steam generator cleaner

It is a highly concentrated product based on citric acid, specially designed for the maintenance of the hammam steam generator.
Citric acid guarantees quick and effective desalination of the system, respecting the integrity of the elements that compose it thanks to the top quality corrosion inhibitors present in the composition.

It eliminates the salts from the generator resistors, which in the long run could endanger its good operation.

It is a highly concentrated product based on citric acid, especially designed for the maintenance of the hammam steam generator.
The citric acid guarantees quick and effective descaling of the hammam system, while protecting the integrity of its mechanical components thanks to the top quality anti-corrosives that it contains.
The citric acid eliminates the salts from the generator resistors, which in the long term could endanger its smooth function.
